Company Installs Asymtek C-741 Conformal Coating Machine

Durham, Connecticut - February 2005 - Technical Manufacturing announced the installation of a new Asymtek C-741 Century selective conformal coating machine which represents the latest in automated conformal coating technology. The machine will provide the company the capability to automatically apply with excellent process control urethanes, acrylics, silicones and epoxies to printed circuit board assemblies in order to provide humidity and other mechanical and electrical protection to the circuitry. The machine is easily programmed by the operator with the EasyCoat software system which is a simple graphical user interface to apply conformal coating material at a specific thickness to select areas of a printed circuit board assembly without the need for taping or other costly manual masking methods typically required for dipping, spraying and brushing applications. The machine is equipped with a universal rail fixturing system whereby multiple printed circuit board assemblies can be processed simultaneously. Additional information and specifications on the machine can be found at http://www.asymtek.com/products/c_740.htm.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturer that has been successfully servicing the electronics manufacturing requirements of small and Fortune 500 companies worldwide since 1985. We built a wide variety of products for our customers and which are used in many different industrial, commercial and military applications for all industries including medical, automotive, measurement and telecommunications. Visit us on the internet at www.techmfgcorp.com for more information on Technical Manufacturing Corporation and our complete line of contract electronics manufacturing services or contact David Bonito at (860) 349-1735.
