

FOR IMMEDIATE RELEASE

Company Implements Proprietary Document Management (DMS) Software System

Durham, Connecticut – October 2012 – Technical Manufacturing Corporation, a leading supplier of contract electronics manufacturing services to the aerospace and defense industry for mission-critical, high-reliability and harsh environment applications, announced this month that it has completed the design, development and implementation of a proprietary document management software system. The system will be used to electronically capture quality records generated by the company's certified ISO 9001:2008 and AS 9100 revision C quality management system at each step during the production and manufacturing process for any product.

Designed by Mr. Anthony Calabrese, Director of Operations for the company, the document management system allows for the electronic scanning, identification, storage and retrieval of any quality record. Quality records are scanned and tagged by document type and unique work order number which is independently verified prior to record storage. Once verified, the record is stored indefinitely in portable document format (PDF) on the company's servers which are then automatically backed up nightly using the SOS Online Backup software solution. Any quality record stored in the system can then be immediately retrieved by the user simply through the selection of the unique work order number assigned to the product build from the company's enterprise resource planning software system. The original hardcopy of the quality record is retained in a dedicated document storage facility.

"We felt the need to custom design our own document management system which is based on the Microsoft Access database software system and integrates perfectly with our Exact Alliance Enterprise Resource Planning software system instead of relying on third-party or off-the-shelf products that are currently available in the market", said Mr. Calabrese. "It meets the needs of the company and in particular satisfies the safe storage, retention and immediate quality record retrieval requirements that our customers demand, especially for aerospace and defense applications" he said.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturing company that has been successfully providing electronics manufacturing services to companies worldwide since 1985. We build a wide variety of electronic and electromechanical products for our customers, which are used in many different commercial and military applications across all industries including the medical, computer, automotive, aerospace, test & measurement and telecommunications industries.
