

FOR IMMEDIATE RELEASE

Employees Certified to the IPC J-STD-001ES Space Applications Electronic Hardware Addendum

Durham, Connecticut – March 2013 – Technical Manufacturing Corporation, a leading supplier of contract electronics manufacturing services to the aerospace and defense industry for mission-critical, high-reliability and harsh environment applications, announced this month that it has completed the certification of its Certified IPC Trainers (CIT) and Certified IPC Specialists (CIS) responsible for product realization to the IPC J-STD-001ES Space Applications Electronic Hardware Addendum. The addendum is a set of supplemental workmanship standards which provides for additional quality requirements that are used in addition to or in place of those currently published in the J-STD-001E specifications to ensure the reliability of soldered electrical and electronic assemblies that must be able to survive the harsh vibration and thermal cyclical environments experienced while getting to and operating in space. It is typically required for high reliability and mission critical electronic assemblies such as SAFE/ARM devices that are used in the aerospace and defense industry where on-demand performance is required, equipment downtime cannot be tolerated or environmental conditions are uncommonly harsh.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturing company that has been successfully providing electronics manufacturing services to companies worldwide since 1985. We build a wide variety of electronic and electromechanical products for our customers, which are used in many different commercial and military applications across all industries including the medical, computer, automotive, aerospace, test & measurement and telecommunications industries.
