

FOR IMMEDIATE RELEASE

Business Continuity and Action Plan Response for Use by Customers, Suppliers  
and Employees to the Global COVID-19 Virus Pandemic

Durham, Connecticut – March 2020 – Technical Manufacturing Corporation, a leading supplier of contract electronics manufacturing services to the aerospace and defense industry for mission-critical, high-reliability and harsh environment applications where reliability and continued performance is critical, announced this month that it is monitoring the spread of the COVID-19 pandemic and are taking every possible step to ensure the health and safety of our customers, suppliers and employees while minimizing any adverse effects of it on our business operations. In accordance with the Defense Department Production Act invoked recently by President Trump and our classification as an Essential Business by the State of Connecticut, our facility will remain open to support the continued requirements of our customers, especially aerospace and defense companies with rated contracts.

We have evaluated the COVID-19 responses from our suppliers and do not anticipate any adverse effect or interruption in the supply chain. We will notify all affected customers immediately regarding any impact to contract requirements including delivery schedules as the situation changes. We are also following the guidelines and recommendations from the Centers for Disease Control and Prevention to help prevent the spread of the virus. To help keep our employees safe during this time, we have implemented travel restrictions, are practicing social distancing and are limiting visitors to the facility until further notice. We also have very strong housekeeping practices in place to keep all commonly used equipment, tools and areas as clean as possible at all times.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturing company that has been successfully providing electronics manufacturing services to companies worldwide since 1985. We build a wide variety of electronic and electromechanical products for our customers, which are used in many different commercial and military applications across all industries including the medical, computer, automotive, aerospace, test & measurement and telecommunications industries.
