

FOR IMMEDIATE RELEASE

Company Develops Cybersecurity Maturity Model Certification (CMMC)
Level 3 System Security Plan Based on NIST SP 800-171

Durham, Connecticut – March 2021 – Technical Manufacturing Corporation, a leading supplier of contract electronics manufacturing services to the aerospace and defense industry for mission-critical, high-reliability and harsh environment applications where reliability and continued performance is critical, announced this month that it has completed development of a System Security Plan in advance of upcoming Department of Defense (DoD) requirements that meets all Cybersecurity Maturity Model Certification (CMMC) level 3 (managed system) policies and procedures for good cyber hygiene. Development of a System Security Plan helps to eliminate cyber vulnerabilities and provides for the protection of Controlled Unclassified Information (CUI) that might be included in a technical data package for circuit card assemblies used in aerospace and defense applications.

The company's System Security Plan satisfies all 110 of the NIST SP 800-171 requirements including the additional 20 specific NIST SP 800-53 supplemental controls required to achieve CMMC certification for a level 3 system. At this level, cyber security activities are continuously reviewed for conformance to standard operating policies and procedures. It also requires that threat information is shared with key stakeholders and for multi-factor authentication (MFA) mechanisms to be in place. The System Security Plan will be independently audited for a three year registration certificate by a Certified Third Party Assessor Organization (C3PAO) as soon as the CMMC Accreditation Body (CMMC-AB) has completed infrastructure development.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturing company that has been successfully providing electronics manufacturing services to companies worldwide since 1985. We build a wide variety of electronic and electromechanical products for our customers, which are used in many different commercial and military applications across all industries including the medical, computer, automotive, aerospace, test & measurement and telecommunications industries.
